

Get up to a \$250 Rebate

on a Professionally Installed Smart Irrigation Controller

In order to conserve potable water while reducing costs to the consumer, Tampa Bay Water Wise is offering rebates to eligible homeowners who have a soil moisture sensor (SMS) or evapotranspiration (ET) controller installed by an approved contractor.

How Does It Work?

- ✓ Soil moisture sensors measure how much water is in the soil and will prevent an automatic irrigation/sprinkler system from watering if the soil is already wet enough.
- ✓ Evapotranspiration controllers monitor weather conditions, like temperature and humidity, to determine how much water your plants need, and then adjust the automatic watering schedule accordingly.

What Are The Benefits?

Eligible homeowners who over-water their landscapes, as determined by Tampa Bay Water Wise, will be able to save water with either the SMS or ET controller.

- ✓ Installation by trained professionals will help ensure optimal performance of your new smart controller
- ✓ Conserve more water
- ✓ Get a rebate of up to \$250
